## The Handozer Equestrian Water Arena Drag and Water Tank Combination

**Handozer Distributing** introduces our new Tow Behind, Equestrian Arena Drag and Water Tank combo model! The **Handozer EQW** comes with a PTO driven, 225 gallon water tank. The **Handozer EQW** also has hydraulic wheel up and down for depth control and easy transport. The **EQW** water tank is operated with the easy plug in PTO pump. The two spray nozzles are also easily adjustable and can spray up to 30' if desired!

The **Handozer EQW** is designed to be user friendly and to prepare the best possible footing in any high use, home, ranch or equine center horse arenas. The new **Handozer EQW** is easy to operate and handle at affordable prices. The **Handozer EQW** will maintain, level and water the footing in your arena, while giving you total control of the working depth you demand. The **EQW** is equipped with 4 rows of ripping teeth. The first row consists of rip shanks that are adjustable 1" to 6" in depth, while the 2nd, 3rd & 4th rows are adjustable 3/4 x 12" harrow spikes, set 2.5" on center! The leveling bar is adjustable & reversible and will also level the most uneven surfaces!

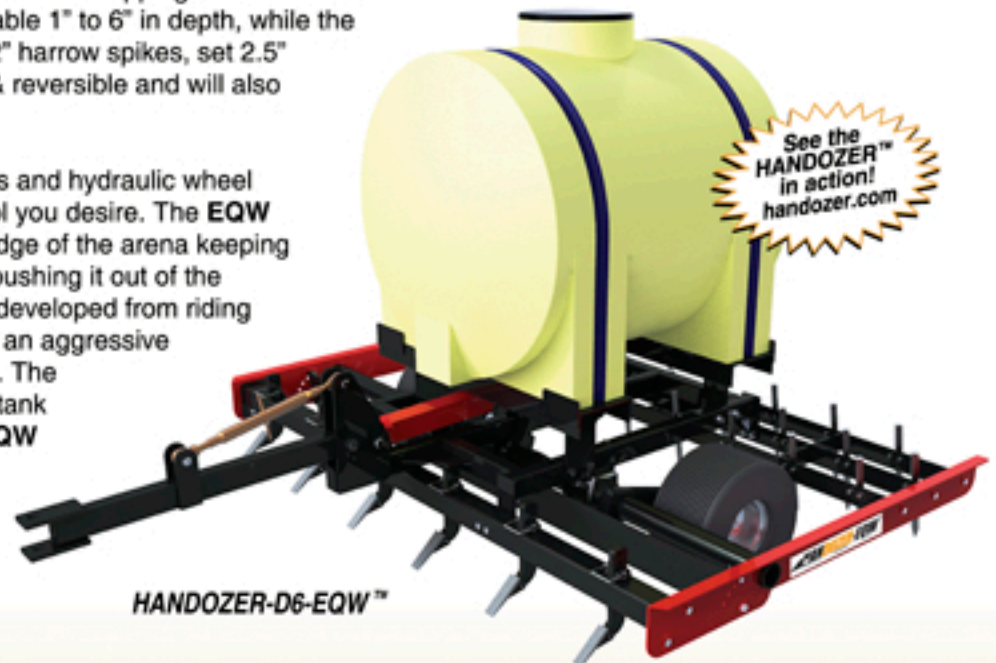

The design of **Handozer EQW** side rails and hydraulic wheel system helps to maintain the depth control you desire. The **EQW** side rails will also cut the mound off the edge of the arena keeping the footing inside the implement and not pushing it out of the arena. The **EQW** fills in the trench that is developed from riding on the sides of the arena. It also provides an aggressive cutting action for the toughest of surfaces. The **Handozer EQW** is an arena drag / water tank dust control implement! The **Handozer EQW** is two pieces of tractor implements for the price of one!

### Perfect Arena Footings Made Easy & Dust Free!

The durable **HANDOZER EQW™** rips, levels, grooms and waters— at the controlled depth you desire!

All models available with optional drag mat attachment for surface finishing
